
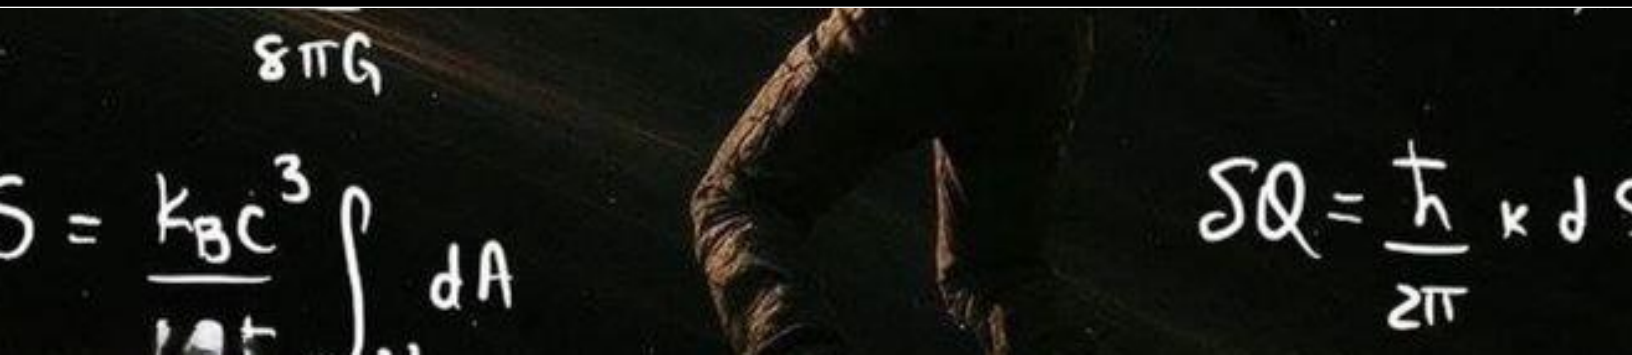
Task 1 : EDA

IEEE SSCS – AI Team



You are required to perform a comprehensive Exploratory Data Analysis (EDA) on the provided Zara sales dataset. The objective of this task is to thoroughly explore, understand, and analyze the dataset in order to extract meaningful insights, identify patterns, detect anomalies, and understand the underlying structure of the data.

Your analysis should include, but not be limited to, the following components:

- Understanding the dataset structure, including the number of records, features, and data types
- Identifying and handling missing values, inconsistencies, or data quality issues
- Performing univariate analysis to examine the distribution of individual variables
- Performing bivariate and multivariate analysis to explore relationships between variables
- Detecting outliers and understanding their potential impact on the analysis
- Generating appropriate visualizations such as histograms, boxplots, correlation matrices, scatter plots, and categorical distribution plots
- Identifying trends, patterns, and key business insights within the dataset

At the end of the analysis, you must produce a detailed report that includes:

- A clear explanation of all EDA steps performed
- Supporting visualizations and statistical summaries
- Key findings and insights derived from the data
- Interpretation of patterns, correlations, and anomalies
- A final analytical summary highlighting the most important conclusions

The final report should be well-structured, clear, professional, and suitable for business and technical stakeholders.
